

P RANGE

Choosing a rapid deployment hangar: 6 points to check

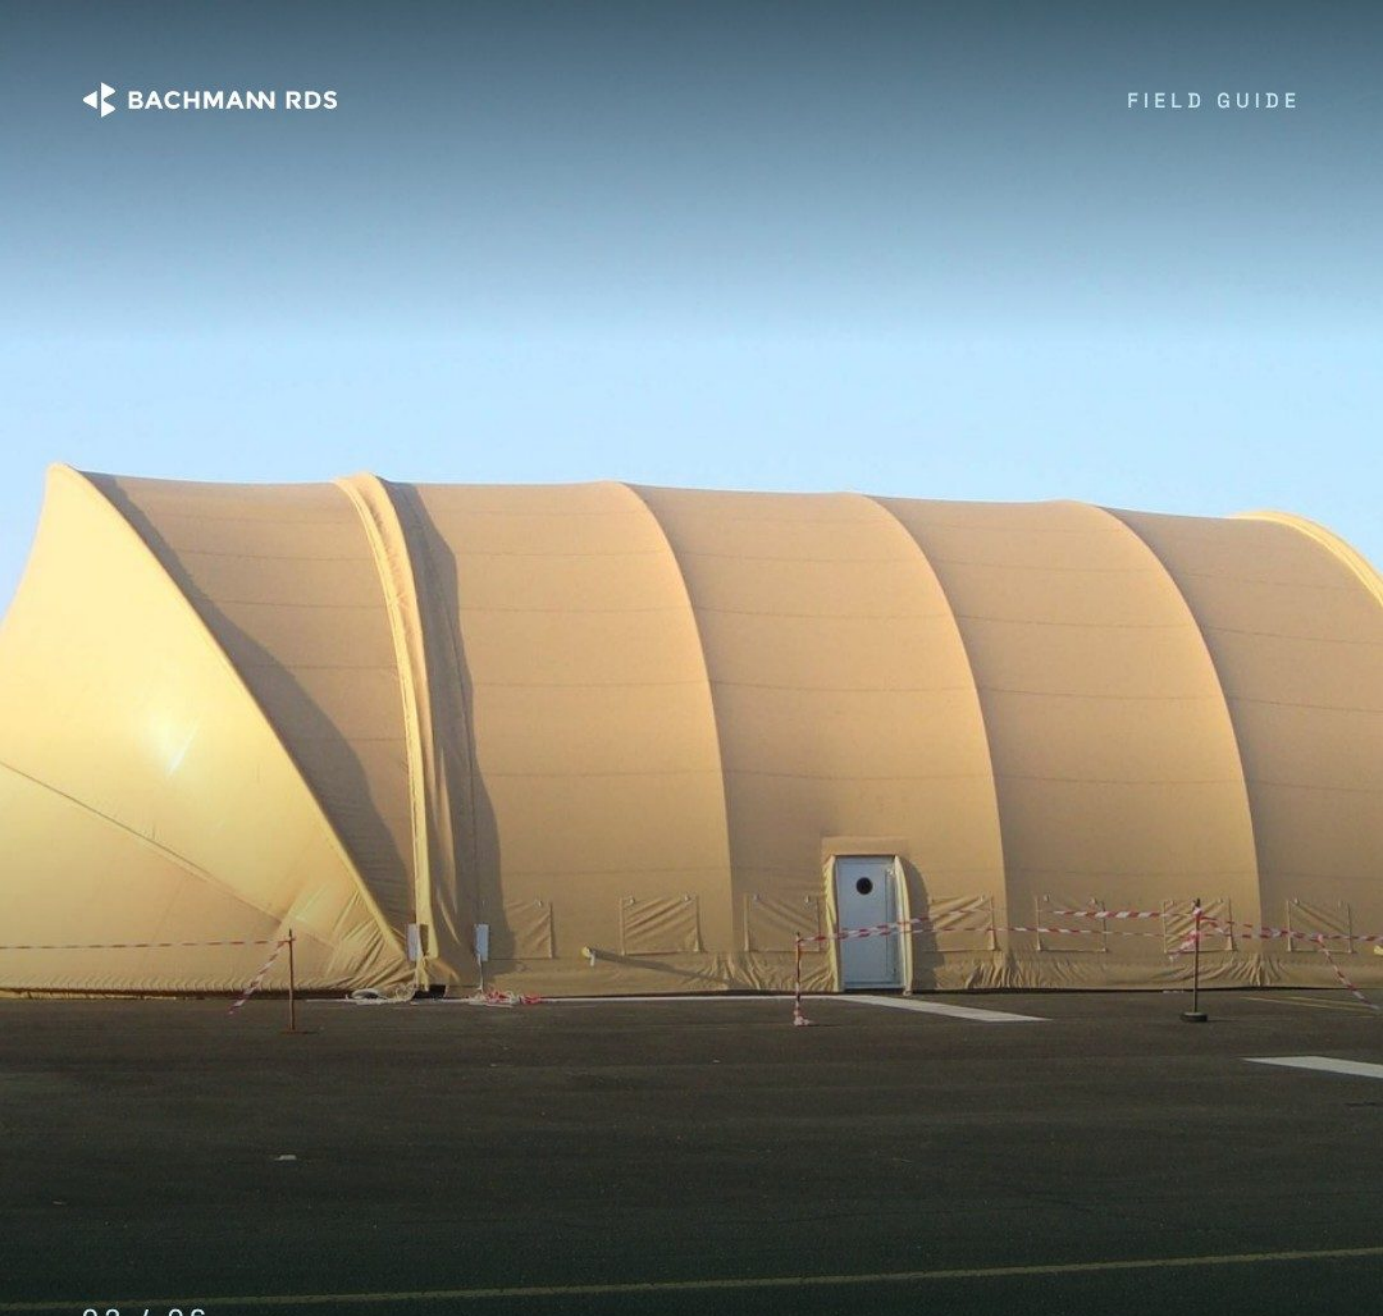

Swipe →

01 / 06

What usable width?

It follows from what you shelter. Our P range runs from 13 to 24 m wide and from 20 m long, extended by adding arches.

02 / 06

Will it stand up to the wind?

Ask for figures calculated for your own site. The P Range is rated for 180 km/h winds.

03 / 06

Which doors?

Vehicle access, aircraft doors, pedestrian doors: they shape everyday use.

04 / 06

What ground and anchoring?

Anchored or ballasted on concrete ground beams: less civil works, and a hangar you can move.

How will you control the temperature?

Air conditioning, ventilation, humidity control and exhaust extraction are available as options, sized for your site.

06 / 06

How long to put up?

From 6 days depending on size, with a crew of 4 or more.
